

RAG Evaluation Pack

A synthetic knowledge base + question bank for testing retrieval-augmented generation systems

This document is a self-contained knowledge base for a fictional company, Northwind Analytics. Ingest it into your RAG platform's index, then test retrieval and generation accuracy using a matching set of questions.

Because all facts below are invented for this document, a correct RAG system must answer using only what's written here — this makes it easy to tell real retrieval apart from the model's own prior knowledge (hallucination).

Part 1 — Knowledge Base: Northwind Analytics

1. Company Overview

Northwind Analytics Inc. was founded in 2016 by Priya Kapoor and Elias Novak in Portland, Oregon. The company builds data-visualization and forecasting software for mid-sized retailers. As of the 2025 fiscal year, Northwind employs 412 people across four offices: Portland (headquarters), Austin, Berlin, and Singapore. The company's current CEO is Priya Kapoor; Elias Novak serves as Chief Technology Officer. Northwind's fiscal year runs from April 1 to March 31.

Northwind went through three funding rounds: a \$2.1 million seed round in 2016, a \$14 million Series A in 2018 led by Cascade Ventures, and a \$52 million Series B in 2021 led by Blue Harbor Capital. The company reached profitability in Q3 of fiscal year 2023.

2. Product Suite

Northwind sells three products: **Compass** (a demand-forecasting engine), **Beacon** (a real-time inventory dashboard), and **Harbor** (a supplier-collaboration portal). Compass was the company's original product, launched in 2017. Beacon launched in 2019. Harbor is the newest product, launched in January 2024.

Product	Launch Year	Core Function	Avg. Setup Time
Compass	2017	Demand forecasting using 18 months of sales history	3 weeks
Beacon	2019	Real-time inventory tracking across warehouses	10 days
Harbor	2024	Supplier communication and purchase-order automation	2 weeks

Compass requires a minimum of 18 months of historical sales data to generate forecasts and supports a forecast horizon of up to 52 weeks. Beacon integrates with six warehouse management systems out of the box: SAP EWM, Manhattan Active WM, Oracle WMS, Blue Yonder, Softeon, and Körber. Harbor currently supports English, German, and Japanese interfaces.

3. Pricing

Northwind uses tiered annual pricing based on the customer's number of SKUs. The Starter tier costs \$18,000 per year and covers up to 5,000 SKUs. The Growth tier costs \$46,000 per year and covers up to 25,000 SKUs. The Enterprise tier is custom-priced and covers unlimited SKUs; it also includes a dedicated customer success manager and a 99.9% uptime SLA. All tiers include Compass; Beacon and Harbor are add-ons priced at \$9,000 and \$12,000 per year respectively. Customers who pay annually in advance receive a 10% discount.

4. Security and Compliance

Northwind is SOC 2 Type II certified and completed its most recent audit in November 2025. Data is encrypted at rest using AES-256 and in transit using TLS 1.3. Customer data is hosted on AWS in the us-west-2, eu-central-1, and ap-southeast-1 regions, and customers may choose their storage region at onboarding. Northwind retains deleted customer data for 30 days before permanent erasure, except for financial records, which are retained for 7 years to meet accounting requirements. Northwind is not currently

HIPAA compliant and does not support healthcare customers.

5. Support and Onboarding

Standard support is available Monday through Friday, 6 a.m. to 6 p.m. Pacific Time, with a target first-response time of 4 business hours. Enterprise customers receive 24/7 support with a 1-hour target first-response time for severity-1 incidents. New customers are assigned an onboarding specialist and go through a four-stage rollout: data integration, configuration, user training, and go-live review. The average time from contract signature to go-live across all three products is 6 weeks.

6. Notable Customers and Case Study

Northwind's largest publicly referenceable customer is Ferren Home Goods, a 340-store home furnishings retailer based in Ohio. Ferren adopted Compass and Beacon in 2022 and reported a 23% reduction in stockouts and a 14% reduction in excess inventory within the first year, according to Northwind's published case study. Ferren has not adopted Harbor as of this writing.
